DETAILED ACTION

Election/Restriction

1. Applicant's election without traverse of Figs. 1-3 in Paper No.10 is acknowledged.

Terminal Disclaimer

2. The terminal disclaimer filed on April 17, 2002 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US 6,286,249 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 U.S.C. § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 42-49, 58-59, 67-73, 82-88, 93-100, 109-110 are rejected under 35 U.S.C. 102(b) as being anticipated by Cheshire (5,255,468).

The patent to Cheshire shows an insect trap in Figs. 1-2, 4, that generates an air outflow using motion and heat to attract insects that flows outwardly from the device to create a plume flowing downwardly and spreading radially from the device. Cheshire also generates an inflow

Art Unit: 3643

substantially counter to and immediately adjacent an upper portion of the plume and then into the trap such that insects attracted to said outflow and flying along the upper portion of the plume towards the device intersect the inflow and are drawn into the inflow as discussed column 2, lines 28-68, column 8, lines 43-55. Cheshire shows a cover member 11-13.

Claim Rejections - 35 U.S.C. § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 50-52, 60-62, 101-103, 111-113 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cheshire, Jr.

The patent to Cheshire shows an insect trap as discussed above. Cheshire discloses the use of a collection bag in column 4, lines 31-32 which would appear to be mounted on the outside of lower portion of the housing 15 which is a tubular member. In reference to claim 50, Cheshire does not disclose mounting an insect trap on the inside of the tubular member, but it would have been obvious to mount the a trap on the inside of the tubular member since the function is the same and no stated problem is solved.

Art Unit: 3643

7. Claims 53-57, 63, 64, 74-81, 89-92, 104-108, 114-119 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cheshire, Jr. (5,255,468) in view of Waters (4,506,473).

The patent to Cheshire shows an insect trap as discussed above, but does not show a carbon dioxide attractant. Waters shows a carbon dioxide insect attractant noting Figs.1 and column 3, line 1-12 that flows into trap 11 by connecting tube 14 from reaction chamber 12. In reference to claims 53, 55, 56, 57, it would have been obvious to provide Cheshire with a carbon dioxide attractant as shown by Waters to attract more insects. In reference to claim 54, the combination of Cheshire as modified by Waters does not disclose where the carbon dioxide is supplied in relation to the fan. However, it would have been obvious to supply the carbon dioxide to a point above the fan to more effectively disperse the carbon dioxide to an area surrounding the trap.
